CAUTION: Before servicing this chassis, it is important that the service technician read the "Safety Precaution" and "Product Safety Notices" in this Service Manual.

SAFETY NOTICE

USE ISOLATION TRANSFORMER WHEN SERVICING

Components having special safety characteristics are identified by a Δ on the schematics and on the parts list in this Service Data and its supplements and bulletins. Before servicing the chassis, it is important that the service technician read and follow the "Safety Precautions" and "Product Safety Notices" in this Service Manual.

*For continued x-radiation protection, replace picture tube with original type of Hitachi approved equivalent type.

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

PROJECTION COLOR TELEVISION

June 1996 HHEA - MANUFACTURING DIVISION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health and Safety Code, Section 25249.5).

When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with solder. Also, when soldering do not inhale any smoke or fumes produced.

This television receiver provides display of television closed captioning in accordance with section 5.119 of the FCC rules.

SAFETY PRECAUTIONS

1. Before returning an instrument to the customer, always make a safety check of the entire instrument, including but not limited to the following items:

- a. Be sure that no built-in protective devices are defective and/or have been deleted during servicing.
 - (1) Protective shields are provided on this chassis to protect both the technician and the customer. Correctly replace all missing protective shields, including any removed for servicing convenience.
 - (2) When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including but not limited to, nonmetallic control knobs, insulating fishpapers, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. **Do not operate this instrument or permit it to be operated without all protective devices correctly installed and functioning. Servicers who defeat safety features or fail to perform safety checks may be liable for any resulting damage.**

- b. Be sure that there are no cabinet openings through which an adult or child might be able to insert their fingers and contact a hazardous voltage. Such openings include, but are not limited to (1) spacing between the picture tube and cabinet mask, (2) excessively wide cabinet ventilation slots, and (3) an improperly fitted and/or incorrectly secured cabinet back cover.

- c. **Antenna Cold Check** — With the instrument AC plug removed from any AC source, connect an electrical jumper across the two AC plug prongs. Place the instrument AC switch in the on position. Connect one lead of an ohmmeter to the AC plug prongs tied together and touch the other ohmmeter lead in turn to each tuner antenna input exposed terminal screw and, if applicable, to the coaxial connector. If the measured resistance is less than 1.0 megohms or greater than 5.2 megohms, an abnormality exists that must be corrected before the instrument is returned to the customer. Repeat this test with the instrument AC switch in the off position.

- d. **Leakage Current Hot Check** — With the instrument completely reassembled, plug the AC line cord directly into a 120V AC outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or a metering system that complies with American National Standards Institute (ANSI) C101.0 Leakage Current for Appliances and Underwriters Laboratories (UL) 1410, (50.7). With the instrument AC switch first in the on position and then in the off position, measure from a known earth ground (metal waterpipe, conduit, etc.) to all exposed metal parts of the instrument (antennas, handle bracket, metal cabinet, screw heads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis. Any current measured must not exceed 0.1 milliamps. Reverse the instrument power cord plug in the outlet and repeat test.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS SPECIFIED HEREIN INDICATE A POTENTIAL SHOCK HAZARD THAT MUST BE ELIMINATED BEFORE RETURNING THE INSTRUMENT TO THE CUSTOMER OR BEFORE CONNECTING THE ANTENNA OR ACCESSORIES.

- e. **High Voltage** — This receiver is provided with a hold down circuit for clearly indicating that voltage has increased in excess of a predetermined value. Comply with all notes described in this Service Manual regarding this hold down circuit when servicing, so that this hold down circuit may correctly be operated.
- f. **Serviceman Warning** — With minimum contrast and brightness, operating high voltage in this receiver is lower than **31.6kV**. In case any component having influence on high voltage is replaced, confirm that high voltage with minimum contrast and brightness is lower than **31.6kV**. To measure H.V. use a high impedance H.V. meter. Connect (-) to chassis earth and (+) to the CRT anode button. (See the following connection diagram.)

Note: Turn power switch off without fail before the connection to the anode button is made.

g. **X-radiation — TUBE:** The primary source of X radiation in this receiver is the picture tube. The tube utilized for the above mentioned function in this chassis is specially constructed to limit X radiation emissions. For continued X radiation protection, the replacement tube must be the same type as the original, HITACHI approved type.

When troubleshooting and making test measurements in a receiver with a problem of excessive high voltage, avoid being unnecessarily close to the picture tube and the high voltage component.

Do not operate the chassis longer than is necessary to locate the cause of excessive voltage.

h. **X-Radiation Shield —**

- 1) This receiver is provided X-ray shield plates for the protection of X-radiation. Do not remove X-ray shield plates A, B, C, or D shown in Fig. 1 unnecessarily, when troubleshooting and/or making test measurements.
- 2) To prevent X-radiation, after replacement of picture tube and lens, confirm these components to be fixed correctly to bracket and cabinet, and not to be taken off easily.

Detailing X-radiation shield.
Fig. 1

2. Read and comply with all caution and safety-related notes on or inside the receiver cabinet, on the receiver chassis, or on the picture tube.
3. **Design Alteration Warning** — Do not alter or add to the mechanical or electrical design of this TV receiver. Design alterations and additions, including but not limited to, circuit modifications and the addition of items such as auxiliary audio and/or video output connectors, might alter the safety characteristics of this receiver and create a hazard to the user. Any design alterations or additions may void the manufacturer's warranty and may make you, the servicer, responsible for personal injury or property damage resulting therefrom.
4. **Picture Tube Implosion Protection Warning** — The picture tube in this receiver employs integral implosion protection. For continued implosion protection, replace the picture tube only with one of the same type number. Do not remove, install, or otherwise handle the picture tube in any manner without first putting on shatterproof goggles equipped with side shields. People not so equipped must be kept safely away while picture tubes are handled. Keep the picture tube away from your body. Do not handle the picture tube by its neck.
5. **Hot Chassis Warning** — **a.** Some TV receiver chassis are electrically connected directly to one conductor of the AC power cord and may be safely serviced without an isolation transformer only if the AC power plug is inserted so that the chassis is connected to the ground side of the AC power source. To confirm that the AC power plug is inserted correctly, with an AC voltmeter measure between the chassis and a known earth ground. If a voltage reading in excess of 1.0V is obtained, remove and reinsert the AC power plug in the opposite polarity and again measure the voltage potential between the chassis and a known earth ground. **b.** Some TV receiver chassis normally have 85V AC (RMS) between chassis and earth ground regardless of the AC plug polarity. These chassis can be safely serviced only with an isolation transformer inserted in the power line between the receiver and the AC power source, for both personnel and test equipment protection. **c.** Some TV receiver chassis have a secondary ground system in addition to the main chassis ground. This secondary ground system is not isolated from the AC power line. The two ground systems are electrically separated by insulating material that must not be defeated or altered.
6. Observe original lead dress. Take extra care to assure correct lead dress in the following areas: **a.** near sharp edges, **b.** near thermally hot parts — be sure that leads and components do not touch thermally hot parts, **c.** the AC supply, **d.** high voltage and **e.** antenna wiring. Always inspect in all areas for pinched, out-of-plate, or frayed wiring. Do not change spacing between components, and between components and the printed circuit board. Check AC power cord for damage.
7. Components, parts, and/or wiring that appear to have overheated or are otherwise damaged should be replaced with components, parts, or wiring that meet original specifications. Additionally, determine the cause of overheating and/or damage and, if necessary, take corrective action to remove any potential safety hazard.
8. **PRODUCT SAFETY NOTICE** — Many TV electrical and mechanical parts have special safety-related characteristics some of which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified Hitachi service data by shading on schematics and by a () in the parts list. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part in Hitachi service data parts list might create shock, fire, and/or other hazards. Product safety is under review continuously and new instructions are issued whenever appropriate. For the latest information, always consult the appropriate current Hitachi service literature. A subscription to, or additional copies of Service literature may be obtained at a nominal charge from Hitachi.

SERVICING PRECAUTIONS

CAUTION: Before servicing instruments covered by this service data and its supplements and addenda, read and follow the SAFETY PRECAUTIONS on page 3 of this publication.

NOTE: If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

General Servicing Guidelines

1. Always unplug the instrument AC power cord from the AC power source before:
 - a. Removing or reinstalling any component, circuit board, module, or any other instrument assembly.
 - b. Disconnecting or reconnecting any instrument electrical plug or other electrical connection.
 - c. Connecting a test substitute in parallel with an electrolytic capacitor in the instrument.

Caution: A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.
 - d. Discharging the picture tube anode.
2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc.) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc." The H.V. Distribution Box has an internal 400M Ω resistor (bleeder resistor) connected from the high voltage to ground. After power is removed from the instrument the high voltage will discharge through the high voltage bleeder resistor. If the tubes have high voltage after power is removed, then the bleeder resistor is defective or the bleeder ground is disconnected.
3. Discharge the picture tube's anode at any of the R, G, or B outputs on the High Voltage distribution box only by (a) first connecting one end of an insulated clip lead to the degaussing or kine aquadag grounding system shield at the point where the picture tube socket ground lead is connected, and then (b) touch the other end of the insulated clip lead to the picture tube high voltage distribution box R, G, or B output, using an insulating handle to avoid personal contact with high voltage.
4. Do not spray chemical on or near this instrument or any of its assemblies.
5. Unless specified otherwise in these service data, clean electrical contacts by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable nonabrasive applicator: 10% (by volume) Acetone and 90% (by volume) isopropyl alcohol (90%-99% strength). **Caution:** This is a flammable mixture. Unless specified otherwise in these service data, lubrication of contacts is not required.
6. Do not defeat any plug/socket B+ voltage interlocks with which instruments covered by this service data might be equipped.

7. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
8. Always connect the test instrument ground lead to the appropriate instrument chassis ground before connecting the test instrument positive lead. Always remove the test instrument ground lead last.
9. Use with this instrument only the test fixtures specified in this service data.

CAUTION: Do not connect the test fixture ground strap to any heatsink in this instrument.

Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

General Soldering Guidelines

1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range 500°F to 600°F.
2. Use an appropriate gauge of resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron tip clean and well tinned.
4. Thoroughly clean the surfaces to be soldered. Use a small wire-bristle (0.5 inch or 1.25 cm) brush with a metal handle. Do not use freon-propelled spray-on cleaners.
5. Use the following unsoldering technique.
 - a. Allow the soldering iron tip to reach normal temperature (500°F to 600°F).
 - b. Heat the component lead until the solder melts. Quickly draw away the melted solder with an anti-static, suction-type solder removal device or with solder braid.

CAUTION: Work quickly to avoid overheating the circuit board printed foil.

6. Use the following soldering technique.
 - a. Allow the soldering iron tip to reach normal temperature (500°F to 600°F).
 - b. First, hold the soldering iron tip and solder strand against the component lead until the solder melts.
 - c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.

CAUTION: Work quickly to avoid overheating the circuit board printed foil or components.

- d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

Use Soldering Iron to Pry Leads

IC Removal/Replacement

Some Hitachi unitized chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

Removal

1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

Replacement

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the areas.)

"Small-signal" Discrete Transistor Removal/Replacement

1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact, then solder each connection.

Power Output Transistor Devices Removal/Replacement

1. Heat and remove all solder from around the transistor leads.
2. Remove the heatsink mounting screw (if so equipped).
3. Carefully remove the transistor from the circuit board.
4. Insert new transistor in circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heatsink.

Diode Removal/Replacement

1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicularly to the circuit board.
3. Observing diode polarity, wrap each lead out of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and, if necessary, apply additional solder.

Fuses and Conventional Resistor Removal/Replacement

1. Clip each fuse or resistor lead at top of circuit board hollow stake.
2. Securely crimp leads of replacement component around stake 1/8 inch from top.
3. Solder the connections.

CAUTION: Maintain original spacing between the replaced component and adjacent components and the circuit board, to prevent excessive component temperatures.

Circuit Board Foil Repair

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board, causing the foil to separate from, or "lift-off," the board. The following guidelines and procedures should be followed whenever this condition is encountered.

In Critical Copper Pattern Areas

High component/copper pattern density and/or special volt-age/current characteristics make the spacing and integrity of copper pattern in some circuit board areas more critical than in others. The circuit foil in these areas is designated as Critical Copper Pattern and is identified and illustrated in this service data in the section titled Safety Related Copper Pattern (see data in the section titled Safety Related Copper Pattern (see table of contents for page number). Because Critical Copper Pattern requires special soldering techniques to ensure the maintenance of reliability and safety standards, contact your Hitachi personnel.

At IC Connections

To repair defective copper pattern at IC connections, use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections.)

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary.)
2. Carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.

Install Jumper Wire and Solder

3. Bend a small "U" in one end of a small-gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.

4. Route the jumper wire along the path of the cut-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area, and clip off any excess jumper wire.

At Other connections

Use the following technique to repair defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

Insulated Jumper Wire

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side. Carefully crimp and solder the connections.

CAUTION: Be sure the insulated jumper wire is dressed so that it does not touch components or sharp edges.

Frequency Synthesis (FS) Tuning Systems

1. Always unplug the instrument AC power cord before disconnecting or reconnecting FS tuning system cables and before removing or inserting FS tuning system modules.
2. The FS tuner must never be disconnected from the FS tuning control module while power is applied to the instrument.
3. When troubleshooting intermittent problems that might be caused by defective cable connection(s) to the FS tuning system, remove the instrument AC power as soon as the defective connector is found and finish confirming the bad connection with a continuity test. This procedure will reduce the probability of electrical overstress of the FS system semi-conductor components.

TECHNICAL CAUTIONS

High Voltage limiter circuit operation check.

1. Turn off TV and connect jig as shown in Figure 2. Adjust jig fully counter-clockwise for minimum resistance.
2. Set the AC input to 120V AC and turn on TV.
3. Confirm test pattern on CRT is a usable picture, then slowly adjust jig until the picture disappears and TV shuts down.
4. When the limiter circuit is operating properly, High Voltage will be less than 37.0kV at 0.6mA when TV shuts down.
5. Turn off set immediately after checking circuit operation.
6. Unplug set for one minute to reset shutdown circuit. Remove jig and voltmeter.

GENERAL INFORMATION

Control Panel
Fig. 3

REAR SPEAKER TERMINALS

Rear Connections Panel
Fig. 4

VIDEO SETTINGS

Select VIDEO SETTINGS to adjust picture settings and improve picture quality.

Use the CURSOR ▲ or ▼ to highlight the function to be adjusted.

Press CURSOR ◀ or ▶ to adjust the function.

Use CURSOR ▲ or ▼ to highlight RESET or ADVANCED SETTINGS, then CURSOR ◀ to return to previous menu. Press EXIT to quit menu.

CONTRAST

Use this function to change the contrast between black and white levels in the picture. This adjustment will only affect the picture when PICTURE SETTINGS AI is OFF.

BRIGHTNESS

Use this function to adjust overall picture brightness.

COLOR

Use this function to adjust the level of color in the picture.

TINT

Use this function to adjust flesh tones so they appear natural.

SHARPNESS

Use this function to adjust the amount of fine detail in the picture.

RESET

When RESET is selected, press CURSOR ▶ to return video adjustments to factory preset conditions.

Press the front panel MAGIC FOCUS button momentarily for auto setup.

To adjust manually, press and hold the MAGIC FOCUS button until CENTER MODE or STATIC MODE is displayed. Press ENTER on the remote to select red or blue. Green is stationary. Use the cursor buttons to adjust. Center mode only adjusts the center section. Static mode adjusts the entire screen. **Note:** This new data is in RAM memory only and will be lost if the MAGIC FOCUS button is pressed again.

Select AUDIO SETTINGS to adjust the TV to your preference and to improve the sound quality.

Use **CURSOR** ▲ or ▼ to highlight the function to be adjusted.

Press **CURSOR** ◀ or ▶ to adjust the function.

Use **CURSOR** ▲ or ▼ to highlight **RESET** or **ADVANCED SETTINGS**, then **CURSOR** ◀ to return to previous menu. Press **EXIT** to quit menu.

This function controls the low frequency audio to all speakers.

This function controls the high frequency audio to all speakers.

This function will control the left to right balance of the TV internal speakers, the **AUDIO TO HI FI** output, and **TRANSMITTER OUT** output (Use the test tone volume levels to control balance when in "Surround-Dolby" Mode).

When **RESET** is selected, press **CURSOR** ▶ to return audio adjustments to factory preset conditions.

CAUTIONS WHEN CONNECTING/DISCONNECTING THE HV CONNECTOR

Perform the following when the HV connector (anode connector) is removed or inserted for CPT replacement, etc.

Fig. 5

During Removal

1. Insert a small flat-bladed screwdriver (adjustment screwdriver: 5-7 mm wide and 0.2-0.3 mm thick) into section (A) in Fig. 6 and then push it in the direction of arrow (B). The lock will release with a click. (The state in Fig. 8 (1) will change to that in Fig. 8 (2).)

Fig. 6

2. Remove the HV cap and remove the anode connector (Fig. 7).

Fig. 7

During Insertion

1. Insert the anode connector deep into the FBT (to section (C) in Fig. 7) and then push the HV cap into the FBT until it clicks.
2. Make sure the connector is securely inserted. (Check that the claw is at the mark on the HV cap shown as in Fig. 8 (1).)

- (1) Lock on
(When connector is inserted)

- (2) Release
(When connector is removed)

 3. ADJUSTMENT POINT	 26
3-1. CRT (R)(G)(B), Cabinet Locations	26
3-2. Main Chassis (Signal, Power/Deflection P.W.B.)	27
3-3. CPT (R)(G)(B), Control P.W.B., Focus Pack	28

1. ASSEMBLED PWB ADJUSTMENT

1.1 Memory initialization

Adjustment procedure

- (1) Press memory initialize key using the R/C.
- (2) Check the OSD according to the chassis type.

Initialize OSD (Memory Switches)

MEMORY SWITCH		
PIP 1	0	1
PIP 2	0	1
POWER ON1	0	1
POWER ON2	0	1
AUX 3	0	1
SUR 1	0	1
SUR 2	0	1
MAGIC F.	0	1
W. CONT	0	1
S. CONT	0	1
ANT	0	1
CTV/PTV	0	1
D. BASS	0	1
3D Y/C	0	1
NOTCH	0	1
PIP POSITION HP	0111 (0000-1111)	
VP	0111 (0000-1111)	
SHOOT BAL. ADJ	37 (0-63)	
SUB BRIGHT ADJ	127 (63-191)	

CHASSIS TYPE TABLE

This table explains the chassis specification for the memory switch arrangement.

	AP63		AP63B	
PIP 1	0	1	0	1
PIP 2	0	1	0	1
POWER ON1	0	1	0	1
POWER ON2	0	1	0	1
AUX 3	0	1	0	1
SUR 1	0	1	0	1
SUR 2	0	1	0	1
MAGIC F.	0	1	0	1
W. CONT	0	1	0	1
S. CONT	0	1	0	1
ANT	0	1	0	1
CTV/PTV	0	1	0	1
D. BASS	0	1	0	1
3D Y/C	0	1	0	1
NOTCH	0	1	0	1

- (3) Press Memory Initialize key of the R/C one more time and check that the set is returned to factory shipping conditions.

Note: The TV will be set to factory shipping conditions. Do not unplug set or press any buttons during this operation.

1.2 Comb filter operation check

Adjustment preparation

- (1) Receive the color bar signal at the regular tuning point.
- (2) Set the contrast control to MAX and the other controls to center.
- (3) Set the AI to OFF.

Adjustment procedure

- (1) Check that between the color bars there are line dots every second color bar as shown in the drawing.

Check (A) and (B) line dots.

	AP63	AP63B
	Dots	Dots
(A)	X	None
(B)	None	None

1.3 Horizontal coarse AFC adjustment (R339)

Adjustment preparation

- (1) Receive the reverse cross-hatch pattern signal. (Cross-hatch lines are black.)
- (2) Connect the oscilloscope to SI2 connector pin ① (Y-out) and pin ⑫ (H-Drive).

Adjustment procedure

- (1) Adjust R339 (AFC) for 13μs delay between pin ① and ⑫.

1.4 Sub-picture position adjustment

Adjustment preparation

- (1) Select signal on main picture.
- (2) Video settings have to be at normal condition.
- (3) Select the single PIP mode.

Adjustment procedure

- (1) Press the Memory Initialize key on the R/C.
- (2) Press the ▼▲ buttons to select the PIP position mode.
- (3) Adjust the VP (vertical) and HP (horizontal) position using the ◀▶ buttons.
- (4) Press the Memory Initialize key of the R/C to store the value in memory.
- (5) Select single PIP mode and shift the sub-picture using the 'shift' button. Distance between PIP and edge of screen should be equal when shifted. If it is not, repeat (1) ~ (5).

Note: Check the position of Multi PIP mode. Check the right edge of the sub-pictures for MV-4 and the left and bottom edge for MV-7 to make sure there is no separation between the Multi PIP and the edge of the screen.

2. FINAL ASSEMBLY ADJUSTMENT

2.1 Focus adjustment

Adjustment preparation

- (1) The set can face in any direction, west, east, north or south.
- (2) Receive the cross-hatch pattern signal.
CONTRAST: CENTER
BRIGHTNESS: -16 (-8 position shown on display)
- (3) The electrical focus adjustment should have been completed.
- (4) The centering DY inclination should have been adjusted.

Adjustment procedure

- (1) Loosen the fixing screw on the lens cylinder so that the lens cylinder can be turned. (Be careful not to loosen too much. If it is loosened too much, rattling when tightening becomes greater and the focus may drift.) After completing steps (5), (6) and (7) below, tighten the fixing screws for each lens with a torque of 7-12kg/cm.
- (2) Apply covers to 2 of R, G and B lenses, and project a single color on the screen and adjust in sequence. (The adjustment order of R, G and B is only an example.)
- (3) For each of the R, G and B lenses, observe the color aberration generated on the outer circumference of the cross-hatch bright line at the center section ± 3 pitches vertically and horizontally from the center.
- (4) If the lens adjustment knob is turned clockwise, viewed from the front, the color aberration changes as follows.

Lens	Change of color aberration
R lens	Red $\rightarrow$ Crimson
G lens	Blue $\rightarrow$ Red
B lens	Purple $\rightarrow$ Green

- (5) In case of G lens, set to the point where the chromatic aberration switches from blue to red. If the chromatic aberration appearing all over the screen is not the same, observe the horizontal bright line at the center of the screen and set to the position where red chromatic aberration slightly appears inside and blue outside (reference value: 1-3mm) within the cross-hatch pitches specified in Table below. When the red chromatic aberration appearing at both sides of the bright line is not equal, observe the side with larger chromatic aberration when adjusting.

Set Size	Pitch between L1 & L2
46"	3.0 cross-hatch pitches
50"	3.0 cross-hatch pitches
60"	3.0 cross-hatch pitches

- (6) In case of R lens, set to the position where the chromatic aberration changes from red to crimson. As shown below, observe the horizontal bright line at the center and set to the position where the crimson chromatic aberration slightly appears inside and red outside (reference value: 1-3mm) within the cross-hatch pitches specified in Table next column.

Set Size	Pitch between L
46"	3.0 cross-hatch pitches
50"	3.0 cross-hatch pitches
60"	3.0 cross-hatch pitches

- (7) In case of B lens, set to the position where the chromatic aberration changes from purple to green. As shown below, observe the horizontal bright line at the center and set to the position where green chromatic aberration slightly appears inside and purple outside (reference value: 1-3mm) within the cross-hatch pitches specified in table below.

Set Size	Pitch between L
46"	3.0 cross-hatch pitches
50"	3.0 cross-hatch pitches
60"	3.0 cross-hatch pitches

Notes: (1) Fixing screw

(2) Color aberration

- (3) Since the G light is very important for picture quality and performance, pay special attention in its adjustment.

Note: Be careful not to touch the lens with your fingers when adjusting.

- (4) For red, setting to the center between red and crimson is optimum.
- (5) For blue, setting to the center between purple and green is optimum.

2.2 White balance adjustment

- (1) Screen adjustment
- (2) High brightness white balance
- (3) Low brightness white balance

Screen adjustment VRs	Drive adjustment VRs
Red: Focus Pack	Red: R873
Green: Focus Pack	Green: R843
Blue: Focus Pack	

Adjustment preparation

- (1) Start adjustment 20 minutes or more after the power is turned on.
- (2) The vertical incident illumination on the screen should be 20 lux or less.
- (3) Set the video settings (contrast: max, others: center) to standard condition.
- (4) For low brightness white balance adjustment, input a white raster signal level of 0.300Vp-p (Video input level).
- (5) For high brightness white balance adjustment, input a white raster signal level of 0.715Vp-p (Video input level).
- (6) Set the drive adjustment VRs (red and green) to 12 ~ 2 o'clock position.
- (7) Turn the screen adjustment VRs (red, green, blue) fully counterclockwise.
- (8) Set video advanced setting white control to warm position.
- (9) Set the S301 switch to the front as viewed from the front of the signal sub P.W.B. (Set to SERVICE side.)

Adjustment procedure

- (1) Gradually turn the screen adjustment VRs (red, green, blue) clockwise and set them where the red, green and blue slightly bright lines just appear evenly on the screen.
- (2) Return S301 to the NORMAL side.
- (3) Select the input signal for high brightness.
(video level = 0.715Vp-p $\pm$ 0.015).
- (4) Adjust the high brightness white balance using the drive adjustment VRs (red, green).
- (5) Select the input signal for low brightness
(video level = 0.300Vp-p $\pm$ 0.015).
- (6) Adjust the low brightness white balance using the screen adjustment VRs (red, green, blue). (Visually adjust.)
- (7) Check that high brightness white balance is obtained. If it does not, return to step (5).

Note: When adjusting the white balance, if the horizontal single raster is to be obtained using S301, check that the screen adjustment VRs are turned fully counterclockwise. Since the phosphorescent surface of the CRT is likely to be burnt, be careful.

White balance: 7500°K+0MPCD

Color coordinate: X.....0.301

Y.....0.310

2.3 Sub brightness adjustment

Adjustment preparation

- (1) Start adjustment 20 minutes or more after the power is turned on. Receive the color bar signal.
- (2) Set the contrast and color controls to minimum.
- (3) The vertical incident illumination on the screen should be 20 lux or less.

W 75%	Y	CY	G	MG	R	BL
A7	A6	A5	A4	A3	A2	A1
b						
c						
d						
Q	I	W 100%			BLK	

GRAY SCALE

Should sink to black

Should rise slightly from black

Adjustment procedure

- (1) Press the memory initialize key on the R/C.
- (2) Press the $\blacktriangle$ button to select SUB-BRIGHTNESS mode.
- (3) Use the $\blacktriangle$ buttons to increase or decrease so that points A1 and A2 sink to black and A3 rises slightly above it. (Visually adjust)
- (4) After above adjustment, SUB-BRIGHTNESS will have value between 63 and 191. Adjustment is now complete.
- (5) After adjustment is done, press the memory initialize key on the R/C one more time and the data is stored in memory.

Note: When selecting SUB-BRIGHTNESS mode the μ con sets the CONTRAST and COLOR to min. automatically but make sure that the other conditions are center. Directly observe the screen by eye without using a mirror.

2.4 Sub picture white balance adjustment (R029, R026, R024)

Adjustment preparation

- (1) Start adjustment after power is on for 20 minutes.
- (2) Use a white raster signal for adjustment.
- (3) Press "FREEZE" on the remote control and select 'single' freeze mode to display the sub picture.
- (4) Set contrast to center, brightness minimum, AI off.

Adjustment procedure

- (1) Connect oscilloscope to P802 and adjust R029 to match blue level of main and sub pictures.
- (2) Repeat for P832 and R026 green, P862 and R024 for red.

Note: If the sub picture has a signal sag, adjust level at center point.

2.5 Surround operation check

Adjustment preparation

Input the following audio signals to the audio input of the VIDEO INPUT terminals.

•When checking surround:

L CH: 400Hz sine wave 475mVrms

R CH: 5kHz sine wave 475mVrms

•Set the AUDIO ADVANCED SETTING for INT. SPEAKERS ON.

•Set the volume controls of FRONT, CENTER and REAR to around their centers.

•Set the BASS, TREBLE and BALANCE to TYP.

Note: Front waveform: Front speaker output of the set
Rear waveform: Rear speaker output of the set

2.5.1. Surround off check

Adjustment procedure

- (1) Set to SURROUND: OFF and check that the waveform shown below is obtained.

Note: The rear and center will have no output.

2.5.2. Surround off/monaural check

Adjustment procedure

Check that the following waveform is obtained. The amplitudes of 2 channels are equal.

Note: Monaural check can be omitted. The rear and center have no output.

2.5.3. Matrix surround check

Adjustment procedure

(1) Set to SURROUND; MATRIX.

•Check that the following waveforms are obtained.

•Front: Check that the phases of R and L are different and 400Hz is superimposed on 5kHz. The amplitudes of R and L are different.

•Rear: Check that the phases of R and L are opposite and 400Hz is superimposed on 5kHz. The amplitudes of R and L are different.

Note: Center has no output.

2.5.4. Matrix surround/monaural check

Adjustment procedure

Check that the following waveforms are obtained.

•Front: R and L waveforms are almost equal.

•Rear: R and L waveforms are almost zero.

Note: Center has no output.

2.5.5. Hall surround check

Adjustment procedure

(1) Set to SURROUND; HALL.

•Front: Check that the phases of R and L signals are different and 400Hz is superimposed on 5kHz.

•Rear: Check that the R and L are opposite and 400Hz is superimposed on 5kHz. The R and L amplitudes are equal.

Note: Amplitude levels of front R and L are not even depending on the P.W.B. Center has no output.

2.5.6. Hall surround/monaural check

Adjustment procedure

Check that the following waveforms are obtained.

•Front: The phases of R and L are different. The amplitudes are different.

•Rear: The phases of R and L are opposite. The amplitudes of R and L are equal.

Note: The monaural check can be omitted. Amplitude levels of front R and L are not even depending on the P.W.B. Center has no output.

2.5.7. Dolby surround check

Adjustment procedure

(1) Set to SURROUND; DOLBY

•Check that the following waveforms are obtained.

•Front: 400Hz is superimposed on 5kHz.

•Rear: R and L are the same signal and 400Hz is superimposed on 5kHz.

Note: MODE: PRO-LOGIC (NORMAL)

2.5.8. Dolby surround/monaural check

Adjustment procedure

Check that the following waveforms are obtained.

•Front: (Almost no output from both R and L.)

•Center: Same as the audio input signal.

•Rear: (Almost no output from both R and L.)

2.6. Shoot balance adjustment (R333)

Adjustment preparation

(1) Receive the reverse cross-hatch pattern signal. (Cross-hatch lines are black.)

(2) Set the video condition to factory reset.

Adjustment procedure

(1) Press the memory initialize key of the R/C.

(2) Press the ▲ button and select SHOOT BALANCE mode.

(3) Using the ◀▶ buttons, gradually adjust so the widths of pre-shoot and over-shoot of the vertical line (black) shown in the circle pattern are balanced. (Visually adjust)

Note: Directly observe the screen by eye without using a mirror.

2.7 Horizontal AFC adjustment (R339)

Adjustment preparation

- (1) Receive the reverse cross-hatch pattern signal. (Cross-hatch lines are black.)
- (2) Set video conditions to factory reset.
- (3) Lens focus should be completed.
- (4) Electrical focus should be coarse adjusted.
- (5) The digital convergence RAM should be cleared (uncorrected state). With the TV set off, press and hold the service switch located on the front panel (see page 11), and then press the power button. Use a small insulated tool to reach inside the control panel to press the switch.
- (6) Raster inclination should be completed.

Adjustment procedure

- (1) Project only green color. Cover R & B lenses or short 2P mini connectors on CPT P.W.B.'s.
- (2) Adjust H-size to minimum. R649 fully counterclockwise.
- (3) Adjust green centering magnet (located on DY) to shift picture left to display edge of raster.
- (4) Adjust AFC (R339) so foldover of front porch occurs. Amount of foldover is 1/2 to 2/3 of front porch (l_1).

- Note:** (1) Front and back porch of video should be equal.
(2) If adjustment is difficult with test pattern, follow adjustment 1.3.

2.8 Raster inclination adjustment (Deflection yoke)

Adjustment preparation

- (1) The set can face east or west.
- (2) Input the single cross test signal.
- (3) Set video conditions to factory reset.
- (4) The lens focus adjustment should have been completed.
- (5) The electric focus should have been coarse adjusted.
- (6) The digital convergence RAM should be cleared (uncorrected state). With the TV set off, press and hold the service switch located on the front panel (see page 11), and then press the power button. Use a small insulated tool to reach inside the control panel to press the switch.
- (7) Start adjustment 20 minutes or more after TV is turned on.

Adjustment procedure

- (1) Apply covers to the R and B lenses and project only green light.
- (2) Turn the G deflection yoke and adjust the vertical raster inclination.

- (3) Then, remove the cover of R or B lens and project red or blue light and green light together on the screen.
- (4) Turn the deflection yoke of R or B and set so that the inclination of R or B with respect to the green light is as shown below on the top and bottom sides.
- (5) After raster inclination adjustment, fixing screw of DY should be screwed with 12 ± 2 kg·cm torque.

- Notes:** (1) If internal cross-hatch does not appear after clearing RAM data, press front panel service switch (see page 11) again.
(2) To restore old RAM data, turn TV off and on.

2.9 Raster position adjustment

Adjustment preparation

- (1) The set can face east or west.
- (2) Input the single cross test signal.
- (3) Set video conditions to factory reset.
- (4) The lens focus adjustment should have been completed.
- (5) The electric focus should have been coarse adjusted.
- (6) The digital convergence RAM should be cleared (uncorrected state). With the TV set off, press and hold the service switch located on the front panel (see page 11), and then press the power button. Use a small insulated tool to reach inside the control panel to press the switch.
- (7) Start adjustment 20 minutes or more after TV is turned on.

Adjustment procedure

- (1) Turn the centering magnets for red, green, and blue to satisfy the condition below. The red and blue horizontal lines should match with green.

Size	Vert. Line	Side of Green
60"	Red l_1	0mm left
60"	Blue l_2	40mm right
50"	Red l_1	7mm left
50"	Blue l_2	42mm right
46"	Red l_1	7mm left
46"	Blue l_2	42mm right

- Notes:** (1) If internal cross-hatch does not appear after clearing RAM data, press front panel service switch (see page 11) again.
(2) To restore old RAM data, turn TV off and on.

Size	l
60"	$1140 \pm 5\text{mm}$
50"	$950 \pm 5\text{mm}$
46"	$875 \pm 5\text{mm}$

2.10 Vertical size adjustment (R612)

Adjustment preparation

- (1) The set can face east or west.
- (2) Input the single cross test signal.
- (3) Set video conditions to factory reset.
- (4) The lens focus adjustment should have been completed.
- (5) The electric focus should have been coarse adjusted.
- (6) The digital convergence RAM should be cleared (uncorrected state). With the TV set off, press and hold the service switch located on the front panel (see page 11), and then press the power button. Use a small insulated tool to reach inside the control panel to press the switch.
- (7) Start adjustment 20 minutes or more after TV is turned on.

Adjustment procedure

- (1) Turn only the green by applying covers to the red and blue lens or shorting the 2 pin TS connectors on the red and blue CPT P.W.B.
- (2) Count the vertical lines of the DCU cross hatch. If the number of vertical lines is 9, go to step (3). If the number of vertical lines is 8, push "SRD" key and then push "5" key on the R/C so the number of vertical lines becomes "9".
- (3) Turn vertical amplitude adjustment VR (R612) so that the distance between the top and bottom horizontal lines is equal to the size shown in the table.

Size	l
60"	$770 \pm 5\text{mm}$
50"	$650 \pm 5\text{mm}$
46"	$580 \pm 5\text{mm}$

- Note:** (1) If internal cross-hatch does not appear after clearing RAM data, press front panel service switch (see page 11) again.
(2) To restore old RAM data, turn TV off and on.
(3) 'SRD' key is not on R/C CLU-952MP. If 'SRD' is needed, please use R/C CLU-951MP.

2.11 Horizontal size adjustment (R649)

Adjustment preparation

- (1) The set can face east or west.
- (2) Input the single cross test signal.
- (3) Set video conditions to factory reset.
- (4) The lens focus adjustment should have been completed.
- (5) The electric focus should have been coarse adjusted.
- (6) The digital convergence RAM should be cleared (uncorrected state). With the TV set off, press and hold the service switch located on the front panel (see page 11), and then press the power button. Use a small insulated tool to reach inside the control panel to press the switch.
- (7) Start adjustment 20 minutes or more after TV is turned on.

Adjustment procedure

- (1) Project only green, the same as 2.10.
- (2) Turn horizontal amplitude adjustment VR (R649) so distance between the left and right vertical lines is equal to the size shown in the table.

- Note:** (1) If internal cross-hatch does not appear after clearing RAM data, press front panel service switch (see page 11) again.
(2) To restore old RAM data, turn TV off and on.

2.12 Beam alignment

Adjustment preparation

- (1) Adjust at least 30 minutes after turning on power switch.
- (2) The static convergence data should be cleared (see section 1.1 Memory initialization).
- (3) Raster inclination, centering, horizontal and vertical amplitudes and optical focus adjustment should be completed.
- (4) Set video conditions to factory reset.
- (5) Receive cross-hatch signals. (Use of internal cross-hatch signals allowed.)
- (6) Short-circuit all metal parts (metal fittings, centering magnet) installed on the projection tubes to GNDs of the projection tubes.
Since metal parts are charged with electricity, shocks may be caused if they are not short-circuited.

Adjustment procedure

- (1) Green (G) tube beam alignment adjustment. Short-circuit 2P subminiature connector plug pins of Red (R) and Blue (B) on the CPT boards and project only Green (G) tube.
- (2) Put Green (G) tube beam alignment magnet to the cancel state as shown below.

- (3) Turn the Green (G) static focus (Focus Pack) counterclockwise all the way and make sure of position of cross-hatch center on screen. (Halo state.)
- (4) Turn Green (G) static focus (Focus Pack) clockwise all the way. (Blossoming state.)
- (5) Turn two magnets forming alignment magnet in any desired direction and move cross-hatch center to position found in (3).
- (6) If image position does not shift when Green (G) static focus (Focus Pack) is turned, Green (G) beam alignment has been completed.
- (7) If image position shifts when Green (G) static focus (Focus Pack) is turned, repeat (2)-(6).
- (8) Conduct beam alignment for Red (R) focus: Focus Pack EFPK Blue (B) focus: Focus Pack EFPK
- (9) Upon completion of adjustment, fix beam alignment magnets with white paint.

2.13 Beam shape adjustment

Adjustment preparation

- (1) The beam alignment should have been completed.
- (2) The raster inclination, centering, horizontal/vertical amplitude and optical focus adjustments should have been completed.
- (3) Set video conditions to factory reset.
- (4) Input the dot signal.

Adjustment procedure

- (1) Green PRT beam shape adjustment. Short-circuit 2P submini connectors on Red and Blue CPT P.W.B.s to project only the Green beam.
- (2) Turn the green static focus fully clockwise. (Blooming.)
- (3) Make the dot at the screen center a true circle using the 4-pole magnet as shown below.
- (4) Also adjust the Red and Blue PRT beam shapes according to the steps (1) to (3).
- (5) After the adjustment is completed, return R, G and B static VRs to the Just focus point.

TRUE CIRCLE SPECIFICATION

TRUE CIRCLE DEGREE: a/b
SPECIFICATION: 0.9-1.1

2.14 Static focus adjustment

Adjustment preparation

- (1) The raster inclination, centering, horizontal/vertical amplitude and optical/electrical focus beam alignment should have been adjusted.
- (2) The static convergence data should be cleared.
- (3) Set video conditions to factory reset.
- (4) Receive the cross-hatch pattern signal.
- (5) Apply covers to the lenses of colors other than the color to be adjusted and project a single color.

Adjustment procedure

- (1) Red (R), Green (G) and Blue (B) static focus adjustment. Vary the static focus VR (focus pack EFPK) and make the center of the cross-hatch pattern clearest.
- (2) Observe the corners of the picture and check that the focus does not get conspicuously worse.

OBSERVING POINTS OF THE CORNER OF THE PICTURE

OBSERVING POINTS

2.15 Blue defocus adjustment

Adjustment preparation

- (1) Optical and electrical focus adjustment should have been completed.
- (2) The convergence adjustment should have been completed.
- (3) Set video conditions to factory reset.

Adjustment procedure

- (1) Input an all-white signal shown below to VIDEO input.
- (2) Short-circuit 2P sub-mini connectors on the red and green CPT P.W.B.s to display only the blue beam.
- (3) Turn the B Focus VR (Focus Pack) fully clockwise.
- (4) Measure the brightness at the center of the screen and turn the B Focus VR (Focus Pack) counterclockwise to adjust the brightness of blue as shown in Table below.
- (5) After the adjustment is completed, if blue exceeds the specification, turn and adjust focus so that the sticking out part of blue satisfies the specification.

Defocus brightness specification

Screen Size	Brightness of Blue
46"	45 cd/m ²
50"	38 cd/m ²
60"	---

Defocus sticking out specification

Screen Size	Blue sticking out
46"	2.0 mm
50"	2.0 mm
60"	2.5mm

Condition: User controls are set to the initial set positions (for shipment) Measuring point Screen center.

Cautions: Correct the brightness gauge and amplitude of the all-white signal periodically. The aperture angle of the brightness gauge is 1°. Use a cross-hatch pattern to check.

2.16 Static convergence adjustment

Adjustment preparation

- (1) The screen can face east or west.
- (2) Display the cross pattern signal or the cross-hatch pattern signal.
- (3) R, G and B lens focus adjustment and R, G and B raster inclination adjustment should have been completed.
- (4) R, G, and B raster position (centering magnet) adjustment should have been completed.
- (5) Vertical and horizontal size adjustments should have been completed.

Adjustment procedure

- (1) Press front panel MAGIC FOCUS button until "STATIC MODE" appears.
- (2) Check that the variable range of the static convergence adjustment is obtained as shown below using the cursor buttons of the remote control transmitter.
- (3) RV, BV RH, BH

If the adjustment cannot be done, turn the centering magnets for R and B and re-adjust the R and B raster position.

Note: (1) Static convergence is set to standard mode during memory initialization.

2.17 Digital convergence adjustment

Note: If replacing a PRT, DY, etc. perform auto-digital convergence first. (Press front panel MAGIC FOCUS switch when in normal customer mode). This can eliminate the need for a complete digital convergence alignment.

Adjustment preparation

- (1) Receive an RF or video signal.
- (2) Set controls to factory preset.
- (3) Install jig screen on the set.
- (4) Note the center of the video pattern displayed. This is necessary to match dotted lines (adjustment point viewed) and actual point that is adjusted and displayed by the video signal.
- (5) Press the front panel service only switch. (See page 11). The pattern displayed is now the digital convergence mode.
- (6) When performing a complete digital convergence adjustment CLEAR DATA in RAM. See 2.8. (1)-(7).

Adjustment point

JIG SCREEN SPECIFICATION

- Notes:** (1) Jig screen part number:
46" - H310353
50" - H310354
60" - H310355

- (2) If only minor adjustments to convergence are needed, the jig screen is not necessary. Use digital data stored in memory and one color as a reference (red, green, or blue). DO NOT CLEAR DATA and WRITE to ROM memory.

2.17.1. Phase adjustment (service mode)

Adjustment preparation

- (1) PHASE adjustment — This is to match the digital convergence cursor position to the video image displayed, and to match the digital convergence cursor position (dotted lines) to digital convergence data position (bent lines).

Adjustment procedure

- (1) Press the SRD button on the remote to select phase adjustment. (Only Green displayed)
- (2) Identify the bent lines and use the cursor buttons to move the dotted lines in between as shown.
- (3) Press SRD to exit PHASE mode.
- (4) Press ENTER 5 times to display external signal.
- (5) Identify center of active video, then press ENTER 5 times to return to internal cross-hatch.
- (6) Press SRD (phase adj.), and use 2, 4, 5 and 6 to position internal cross-hatch center on active video center identified in step (5).
- (7) Press SRD to exit PHASE mode.

2.17.2. Raster position adjustment

Adjustment preparation

- (1) Position adjustment — This will move an entire color. Use this adjustment to match colors at the center of the screen. (Active video center from external signal and physical screen center should now match from phase adj. 2.17.1.).
- (2) Use the buttons below to switch color to adjust.
"RECALL" - Green
"O" - Red
"AVX" - Blue

Adjustment procedure

- (1) Press the FREEZE button. Extra horizontal lines appear to confirm raster position mode.
- (2) Use the cursor buttons to adjust position.
- (3) Press FREEZE again to exit raster position mode.

- Notes:**
- (1) Other functions cannot be accessed when in raster position adjustment mode. Press FREEZE and confirm extra horizontal lines disappear to exit raster position mode.
 - (2) Press MENU to switch between all colors displayed or adjustment color and Green only.

2.17.3. Convergence point adjustment

Adjustment preparation

- (1) Select color to adjust.
"RECALL" - Green
"O" - Red
"AVX" - Blue
- (2) Use 4, 6, 2, and 5 to move the cursor position (dotted lines).
- (3) Use cursor buttons to move the convergence point.
- (4) Three adjustment modes are available:
 1. (3x3) Press "RECALL" 5 times
 2. (7x5) Press "O" 5 times
 3. (13x9) Press "AVX" 5 times

For touch-up, only the (13x9) mode is necessary. This will adjust every cross-hatch intersection point on the screen.

For complete adjustment, start with (3x3) mode. This will adjust center point and eight edge points only, but will greatly reduce adjustment time. Then use (7x5) mode, and finally (13x9) mode to finish convergence.

If "S" distortion appears between cross-hatch lines repeat (7x5) mode to change calculation process while adjusting to remove distortion, then return to (13x9) mode to finish touch-up convergence.

Adjustment procedure

- (1) Start adjustment at the center of the screen.
- (2) Continue adjustment at next closest position.
- (3) Adjust center area first, and ending with edge sections.
- (4) Press the AI button to perform interpolation operation.
This process will take about 15 seconds and no picture will be seen at this time.
- (5) After interpolation, check convergence again and repeat (1)-(5) if necessary.
- (6) When convergence is acceptable, press SHIFT to write data to ROM memory. ROM WRITE? is displayed to alarm system that ROM will be overwritten with new data. Press the SHIFT button again to write displayed data to ROM.
- (7) DATA WRITE TO ROM will take approximately 20 seconds and no picture will be displayed.
- (8) Green dots will be displayed when operation is complete.
- (9) Press MUTE to return to convergence pattern, then confirm again convergence is acceptable.
- (10) Press SHIFT (ROM WRITE) mode, then press ANT to initialize sensor data positions.

- Notes:**
- (1) Display only green for easier adjustment and match to jig screen. Press "MENU", THEN PRESS "RECALL".
 - (2) Perform interpolation and data write to ROM after green adjustment. Once green has been confirmed to match jig screen, the jig screen can be removed. Do not readjust the green color after jig screen has been removed. This is now your reference color.
 - (3) Display green and red only and match red to green.
 - (4) Display all colors and match blue to green and red. Touch-up red color if necessary.

- (5) Existing DATA in ROM can be read by pressing the SWAP button 2 times. This data can be used after replacing a component (CRT, DY, etc.) Where complete convergence adjustment is not necessary be careful not to overwrite this data.

DO NOT write cleared RAM data into ROM or a complete convergence adjustment will be necessary. Remember to try MAGIC FOCUS before starting convergence adjustment to minimize adjustment time.

2.17.4. Digital Convergence Remote Control

2.17.4. Digital convergence remote control

Note: Digital Convergence Adjustment procedures (2.17) were described for use with a CLU-951MP remote control. It is not possible to make Phase Adjustment (2.17.1) using the CLU-952MP remote control. If phase adjustment is necessary, please use the CLU-951MP remote control.

3. ADJUSTMENT POINT

3.1 CRT, cabinet locations

1. CENTERING MAGNET FOR RED PRT
2. CENTERING MAGNET FOR GREEN PRT
3. CENTERING MAGNET FOR BLUE PRT
4. 4-POLE MAGNET FOR BEAM FORM ADJUSTMENT
5. BEAM ALIGNMENT MAGNET
6. DIGITAL CONVERGENCE MODULE
7. FOCUS PACK (TOP ADJUSTMENTS FOR FOCUS, BOTTOM FOR SCREEN)

3.2 Signal PWB, Power/Deflection P.W.B. adjustment points

3.3 CPT, Control P.W.B., Focus Pack adjustment points

TROUBLESHOOTING

1. No raster

2. No picture

3. Reception impossible with snow noise ANT A - Green Channel OSD

ANT B - Yellow Channel OSD

4. Defective synchronization

5. Incorrect color

6. No sound (when Surround OFF)

7. Convergence errors

If an error message or code appears while performing MAGIC FOCUS or Initialize (SHIFT, ANT in service mode) follow this confirmation and repair method.

1. Turn on power and receive any signal.
2. Press front panel service switch.
3. Press "SWAP", "ANT" on remote control.
4. Error code will be displayed in bottom right corner of screen. If there is no error, an 'INITIAL OK' message will appear on screen.
5. Follow repair table for errors.

DCU REPAIR TABLE

Error Code	Error Display	Countermeasure	Application	
			Initialize	Magic Focus
1	VF Error	Replace DCU	X	X
2 *2	Connect 1	1. Darken outside light 2. Placing of sensor 3. Is pattern hitting sensor 4. Check connection and solder bridge of sensor 5. Replace sensor 6. Replace sensor P.W.B. 7. Sensor Connector check 8. Replace DCU 9. Adjustment check (H/V size, centering)	X	--
3*2	A/D Level	Same as Error Code 2	X	X
4	Over Flow	1. Check the placement of sensor 2. Adjustment check (H/V size, centering) 3. Conv. amp gain check *1 (check resistor values only)	X	X
5	Convergence	Same as Error Code 4	X	X
7	Operation	Same as Error Code 4	--	X
9	Connect 2	Same as Error Code 2	X	X
10	Noise	Input strong field strong signal. Check the wiring of connector between sensor and DCU.	X	X
11	SYNC	Input strong field strength signal. Input standard signal NTSC	X	X

*1 --RK 15, 16, 20, 21, 25, 26, 30, 31, 35, 36, 41, 42 check these resistors.
